

EDUCATION

Haliç University

Software Engineering Student

- **Relevant Coursework:** Algorithms & Data Structures, Database Management (SQL), Visual Programming, Web Development, Object-Oriented Programming (Java/C++).
- Maintaining a focus on high-performance software design and applying academic theory to practical AI and automation projects.

42 Türkiye

Feb 2023–Jun 2023

- **Program:** Common Core Curriculum (Software Engineering Focus)
- Mastered low-level programming in C by recreating standard system libraries (Libft) and implementing complex data structures from scratch, focusing on efficient memory management and algorithm optimization.
- Developed a deep understanding of Unix system calls, process communication, and multithreading through 100% project-based, peer-evaluated learning.

EMPLOYMENT

Treomind – AI Engineer, Intern

Jun 2025–Aug 2025

- Spearheaded the development of an automated AI Banking Assistant, utilizing Natural Language Processing (NLP) to categorize customer queries and automate responses, resulting in a 40% reduction in manual ticket handling.
- Leveraged knowledge in Python and TensorFlow to build and fine-tune Large Language Models (LLMs). Implemented Retrieval-Augmented Generation (RAG) to ensure AI responses remained grounded in financial documentation.
- Gained hands-on experience in API integration (REST), data preprocessing, and MLOps principles, focusing on model versioning and deployment using Docker containers for scalable infrastructure.
- Developed robust error-handling protocols to manage model hallucinations, ensuring 98% reliability for financial data interactions.

SOFTWARE PROJECTS

Brain Tumor Detector AI

- Developed a deep learning model for the automated detection and classification of brain tumors from MRI scans using Convolutional Neural Networks (CNN) with a focus on medical imaging accuracy.
- Implemented data augmentation and preprocessing pipelines to handle class imbalance in medical datasets; utilized Transfer Learning with architectures like ResNet/VGG to achieve high sensitivity and specificity.
- Utilized: Python, TensorFlow/Keras, OpenCV, NumPy, Scikit-learn, Medical Image Processing.

3D Puzzle Exploration Game — Personal Project

- Designed and developed a 3D puzzle exploration game from the ground up using Unity and C, implementing player controllers, physics-based interactions, and dynamic scene management.
- Optimized game performance by managing asset memory, configuring lighting bakes, and streamlining scripts to ensure stable frame rates.
- Utilized: Unity, C, Blender, AI Pathfinding, Unity NavMesh, Finite State Machines, 3D Modeling, Rigging

ESP32-CAM Smart Security System

- Designed an IoT-based security camera system utilizing motion detection to capture and transmit real-time video feeds over a local network, handling hardware constraints like low RAM and power management.
- Utilized: C++, Arduino IDE, ESP32-CAM, IoT Protocols, Embedded Systems, Circuit Design.

SKILLS

- **Programming:** Python (Advanced), C (Advanced), C++, Java, SQL, JavaScript, HTML/CSS.
- **AI & Data:** TensorFlow, Keras, Scikit-learn, OpenCV, MediaPipe, Pandas, NumPy, NLP, RAG.
- **Tools & Hardware:** Git, Docker, VS Code, ESP32, Arduino, Blender (3D Modeling).

CERTIFICATES

- **Data Analysis with Python** — FreeCodeCamp
- **Data Bootcamp** — Treomind
- **Object tracking, Detection, Car speed, Pose estim in Python** — Udemy
- **Flutter & Dart - The Complete Guide** — Udemy
- **CS50: Introduction to Computer Science** — Harvard University / edX
